

[METHOD FOR ACCESSING DATA IN A COMPUTER AND THE COMPUTER THEREOF]

Abstract of Disclosure

A method for data accessing in a computer and the computer thereof is provided. The computer includes a non-volatile memory and a volatile memory, the non-volatile memory having a first portion and a second portion, and the first portion storing the basic input/output system (BIOS) of the computer. The method includes (a) copying data in the second portion of the non-volatile memory to the volatile memory when the computer starts up; (b) updating data stored in the volatile memory when a user wants to update corresponding data in the second portion of the non-volatile memory; and (c) restoring the data in the volatile memory to the non-volatile memory when the computer is ready to shut down.
